

SERIES 500

M.A.N.T.T.[®] Awnings

FEATURES

High resistance to wind

The aluminum structure provides wind resistance up to 70 km/h

80% waterproof

The high quality fabric makes the covering 80% waterproof

Cool ambience

Lower temperatures in summer and the comfort of a cool ambience under the covering

Heatable area

The covering can be fitted with heaters

Our **Sun Awning system** is a semi-automatic covering solution with spring or hand crank functioning. On request, it can be motorised.

If spring operated, the awning is pulled down by a rope. By releasing the rope the awning automatically rolls up.

If operated by crank handle, the awning can be opened and closed by turning the handle left or right.

Our Sun Awning is made of a powder coated aluminum frame that never rusts and high quality awning fabrics.

It's a special shade system, ideal for restaurants, hotels, swimming pools, terraces and many other applications. Being bolt connected, it's very easy to install and remove.

Important features:

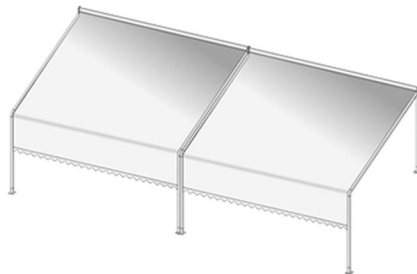

- The awning rolls down to the ground, thus covering the front;
- It is waterproof and wind resistant.

One of the main differences between our Sun Awning and a traditional retractable awning is that our shade system has two fastening points which turn it into a more resistant structure. Moreover, our system offers frontal protection from the sun and rain (80% waterproof). Optionally, you can use lateral awnings to provide additional shade, easy to install and remove.

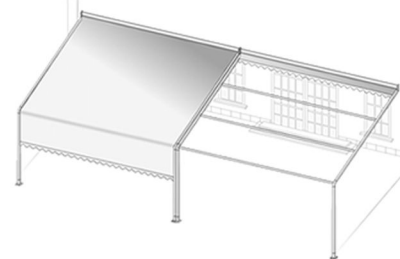

COMBINATIONS

SINGLE

MULTIPLE, SELF-BEARING

MULTIPLE WITH WALL FASTENING

DOUBLE PITCHED, SELF-BEARING
